

# PREVENT ACCIDENTS

With Blood Segment Opener, healthcare workers do not need to cut the segments anymore, which allows them to become more efficient in cross-matching samples.

# BLOOD SEGMENT OPENER

FOR BLOOD TYPING DONOR  
SEGMENTS IN BLOOD BANK

- Blood Segment Opener is a single-use device that makes it easy for lab technicians to complete pre-transfusion type and cross procedures while minimizing the risk of spills and breakage. Segment Opener allows lab technicians to get a sample typed and matched with fewer steps.
- Insert the blood segment into the blood segment device.
- Press until the needle punctures the blood segment.
- Let blood flow from the segment into the specimen tube.
- Discard the blood segment and the blood segment device into a medical waste container.
